

Problem Solving – Essential Soft Skills for Corporate Success

Skills & expertise to help you increase your knowledge in the field of essential soft skills

About the Workshop

Problem Solving and Decision Making involves an approach based on critical thinking is the analysis of facts to form a judgment. The subject is complex, and several different definitions exist, which generally include the rational, skeptical, unbiased analysis, or evaluation of factual evidence.

In a nut shell, our courses are designed on the basis that you have got nothing to lose and everything to gain.

About the instructor

Training will be delivered by an experienced trainer with 25+ years of career experience imparting education and training services both locally and internationally and have served international enterprise technology vendors including IBM, Fujitsu, and ICL.

Our instructor holds various industry professional certifications in the space of enterprise servers and storage technologies, Information Security, Enterprise Architecture, ITIL, Cloud, Virtualization, Green IT, and a co-author of 10 IBM Redbooks and have developed 30 plus courses in AIX, storage, securities and digital technologies.

The training course flow will be a mix of lectures, video demonstrations, and classroom discussions so that participants can have a detailed understanding of various components of technologies causing digital disruption.

A workshop designed to develop leaders for tomorrow:

Today, as companies increasingly need to become more dynamic, interconnected and flexible, thus soft skills are becoming critical. According to various global surveys and reports, senior executives are now considering the acquisition of soft skills as an essential components important to fostering employee retention, improving leadership capabilities and qualities, and building a meaningful culture under a stressful challenging environment. This workshop is designed to help resources today to improve their conflict management and resolution skills with a vision to develop dynamic leaders for tomorrow.

Course Highlights

Critical thinking can be seen as having two components: 1) a set of information and belief generating and processing skills, and 2) the habit, based on intellectual commitment, of using those skills to guide behavior. It is thus to be contrasted with: 1) the mere acquisition and retention of information alone, because it involves a particular way in which information is sought and treated; 2) the mere possession of a set of skills, because it involves the continual use of them; and 3) the mere use of those skills ("as an exercise") without acceptance of their results.
